## DETAILED ACTION

### *Drawings*

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "lateral move irrigation system" recited in claim 6 and the "corner span" recited in claim 7 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 6 and 7 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification does not appear to disclose neither a lateral move irrigation system nor a corner span recited in claims 6 and 7, respectively.
4. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites "a plurality of spaced-apart drive units" in lines 2-3. The claim further defines "at least one of said drive units including a generally transversely extending base beam having first and second ends" in lines 4-5. If there is only one drive unit that includes a generally transversely extending base beam having first and second ends, there is no longer a plurality of drive units. The claim is contradictory.

According to the specification, page 2, lines 7-24 and page 4, lines 5-11, the first in-line drive assembly and the second in-line drive assembly appear to be sub-assemblies of the spaced-apart drive units. Therefore, the recitation of the "first in-line

drive assembly” and the “second in-line drive assembly” recited in claim 1, lines 6 and 8, respectively, appear to be double inclusions of the drive units recited in line 3.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1, 2, 4, 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Chapman (6,131,833).

Chapman discloses a self propelled irrigation system including a pipeline 14 supported upon a plurality of spaced-apart drive units 22. The drive units 22 include a generally transversely extending base beam 24. Chapman further discloses a first and second in-line drive assemblies including: an elongated support member 60; a first driven wheel 48; a second driven wheel 48.
